

IN-DRAWER DETECTION

Every Transaction.
Every Note.
Every Time.

*There are many roads to
prosperity, but one must be
taken. Inaction leads nowhere.*

- Robert Zoellick

Check Note.

Counterfeit Currence Detection

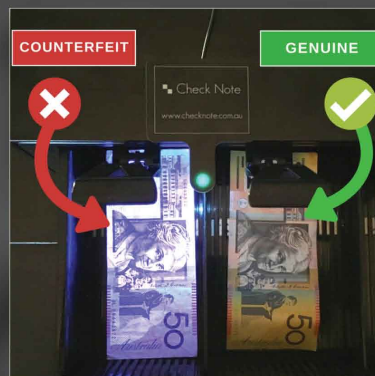

WHY CHECK NOTE?

Unlike other devices on the market, **Check Note is the world's first counterfeit currency detection device** that mounts on to the cash drawer that you already have. This allows your cashiers to detect counterfeit notes as they're placed in the cash drawer - before change is given. Check Note uses special-wavelength UV-light that causes counterfeit notes to shine brightly. This allows your staff to **halt a fraudulent transaction** before it is completed.

Check Note is unique in so for that every note is checked discreetly by your cashier, without slowing down your venues operation, or making your valued customers feel untrustworthy. **Every transaction. Every note. Every time.**

Every note. Every time.

WANNEROO Police Station office-in-charge Simon Hazell advised business' to install devices such as the Check Note...

"It's beneficial to have a device to detect the counterfeit notes..."

- Joondalup Weekender

KEY BENEFITS

- » No more excuses from staff! - **Every note is discreetly verified** without slowing down venue operation.
- » **Easy as 1,2,3** - Check Note is compatible with any Point of Sale system and can be installed by anyone in under 30 seconds
- » **Rapid return on investment** - one detection and it pays for itself.

DON'T BE A VICTIM

Let's say that your cashier is given a counterfeit \$50 note when a customer is paying for a \$5 item. Not only does the customer leave with the stock, they also receive \$45 change from your cashier. You have now lost the stock item, and you've also given away \$45 in hard cash. You're now stuck with a worthless piece of paper which is illegal to possess or put back into circulation. The bank will not refund or replace your losses.

Contact us today to find out more about how **Check Note can empower your business and save you money.**

STATISTICS

In the 2016-2017 financial year, the Reserve Bank of Australia had over **\$1.47 million dollars of counterfeit notes** handed in from business's or seized by police. This figure does not take into account the many counterfeits that were not reported to the Reserve Bank of Australia, as countless businesses will simply dispose of the fake notes themselves; knowing that they cannot redeem any lost cash.
